

Security Management System -Managing Infinova 307X NVR channels

This document describes steps to configure Infinova 307X NVR cameras in Security Management System software.

Note – 'Microsoft Visual C++ 2015 Redistributable (x86)' needs to be manually installed on all server computers and all client workstation computers, in the system which includes Infinova 307X NVR channels.

Video display in Security Management System server software

By default, video display for 'Infinova 307X NVR' channels is disabled in the Security Management System server software; since most of the server computer hardwares do not have sufficient graphics capabilities.

To enable video display for 'Infinova 307X NVR' channels in Security Management System server software, please navigate to 'Server settings -> Preferences Camera 2' page from the left hand side navigation menu.

192.168.0.75	Server settings → Preferences (Camera 2)

Click on 'Edit' button to enable controls.

Un-tick "Disable Infinova 307X NVR channel live video viewing" checkbox Un-tick "Disable Infinova 307X NVR channel playback video viewing" checkbox. And click on 'Save' button to save the settings.

Notes -

(a) When video viewing is disabled for 'Infinova 307X NVR' channels, the Security Management System server software displayed black video with 'Disabled' message embedded in it.

(b) Just enabling the video viewing for 'Infinova 307X NVR' channels in the Security Management System server software does not ensure video display.

Whether videos from 'Infinova 307X NVR' channels are displayed successfully, depends on the server computer hardware capabilities. If server computer hardware is not compatible, videos for 'Infinova 307X NVR' channels will not be displayed. Either black window or a blank window will be displayed in such cases. It is recommended to switch back to default configuration in such cases, to disable video viewing of 'Infinova 307X NVR' channels.

Adding Infinova 307X NVR channels in Security Management System server software

Please navigate to 'Video devices-> Channels' page from the left hand side navigation menu.

The export queue will be processed item by item and status will be displayed and updated for each of the item.

Once export queue is processed completely, 'Export completed' dialog box will be displayed.

Export completed	\times
Export Directory Path	
C:\Program Files (x86)\Infinova\Security Manage	
Closing in 56 second(s)	

Click on 'Browse' button to go to the exported video location from standard Windows Explore. A separate sub-folder is available for each item in the export queue.

A player application named 'Infinova307XPlayer.exe' is also copied along with the exported video. The player application can be used to playback the exported files.
