

Infinova[®] 2217 Security Management System

Smartphone Client for iPhone

**For Smartphones which use
iOS 7 and above Operating System**

User Guide

February 2020

1. Installation

Note: The steps and screen shots described in this document are for iOS 7 and above Operating System. The links and appearance may vary based on iOS Operating System version installed on the SmartPhone device.

Installation:

- On your iPhone device, go to “App Store”
- In search area, search for “VMS Client 02.00.01”
- Install the application

2. Login

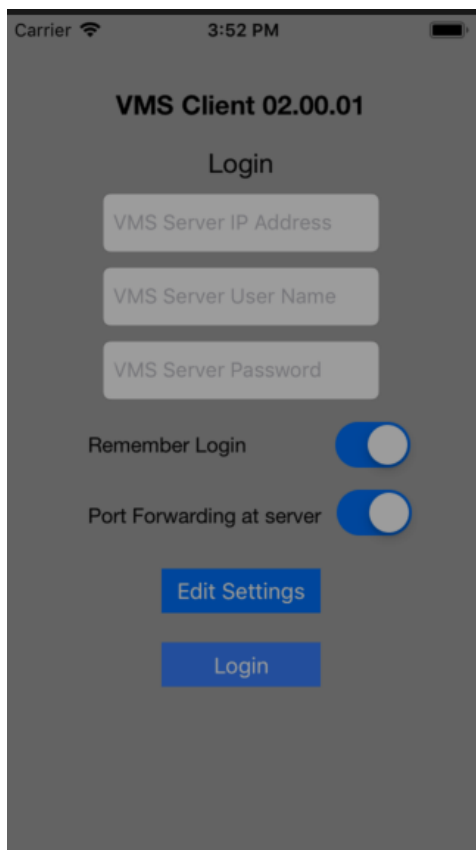

This is the first screen which you will see after running the SmartPhone client.

Please type the IP address used by the server software. Please refer to the 'Security Management System Server – User Guide' document, 'Quick Start' section for details on how to locate the IP address used by the server software.

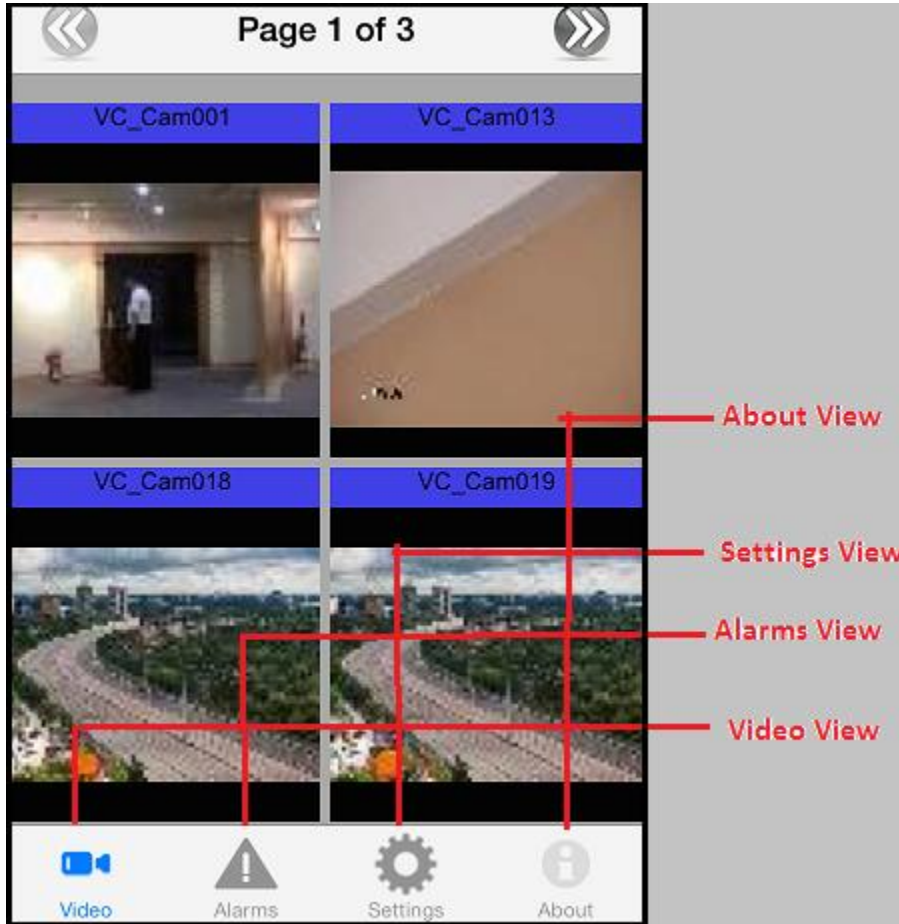

Important - Only users with 'Smartphone Client' privilege can login from the SmartPhone client applications. Please refer to the section 'Security Management System Server Software Configuration', available in this document, for steps to add and configure a user with 'Smartphone Client' privilege in the Security Management Server.

Type the valid 'User name' and 'Password'. This should match with the user configured in the server software, and the user should have the 'Smartphone Client' privileges. Please refer to the 'Security Management System Server – User Guide' document, 'Quick Start' section for details on how to configure new 'Smartphone Client' privilege user.

'Remember Login' checkbox remembers the username and password for the subsequent sessions.

After login, the main application window is displayed which has live video view, alarms view and settings view.

3. Live View

This view displays video streams for all video channels in video groups which have “Smartphone Client” privilege. For more information on how to create camera groups and grant privilege, refer to ‘Section: Security Management System Server Software Configuration’ in this document.

User can navigate through video pages by clicking on previous (<<) and next (>>) page buttons on top.

4. Full Screen View

User can tap on one of the videos on live view to see it on full screen. This helps user in viewing video in more detail. User can navigate through video pages by swiping pages with page swipe gestures.

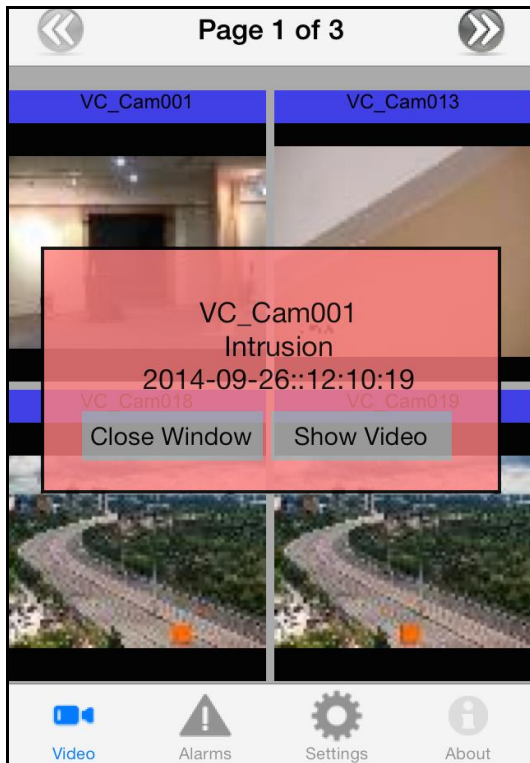

If camera PTZ is enabled in VMS Server, then PTZ buttons are displayed in 1X1 view as shown. User can press the button to pan / tilt/ zoom the camera.

5. Alarms View

Alarms view shows the list of all the alarms that have happened at the server side.

When a new alarm is received, the application shows an alert to user.

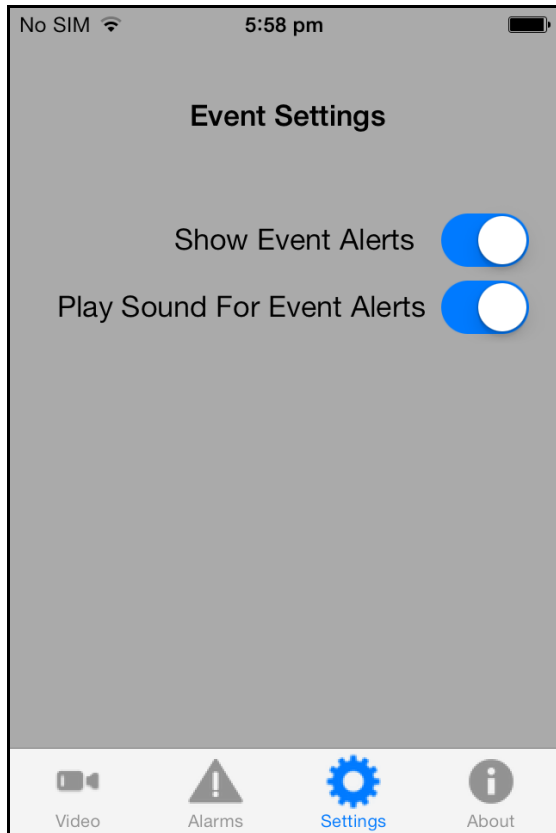

Clicking “Show Video” shows live view for source of alarm

Clicking “Close Window” closes event alert window.

6. Settings View

Following Events Settings can be done from settings view.

If “Show Event Alerts” is checked, then event alert window is shown when a new alarm is received

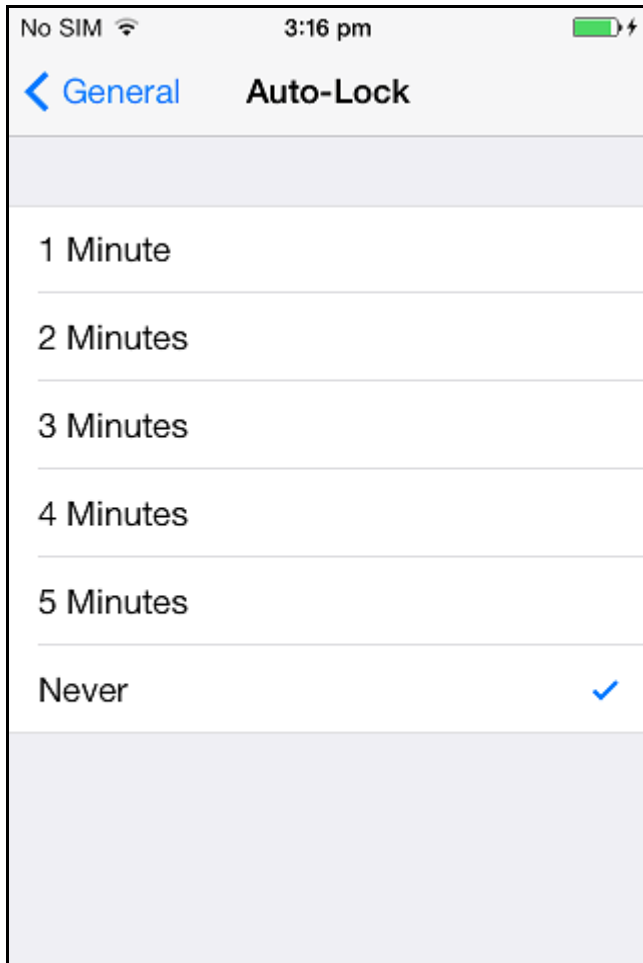

If “Play sound for event alerts” is selected then alert sound is played when a new alarm is received

7. iPhone – Additional Optional Settings

Keep awake setting

By default, the phone sleeps when there is no activity on screen. This also closes the application. Hence if you want to run the application continuously, you will have to do setting for keeping the Smartphone awake.

Go to Settings->General->Auto-Lock and select “Never” so that your screen does not automatically gets off and locked during testing.

Add New User

User Name: SmartPhoneUser

Password: ●●●●

Confirm Password: ●●●●

Privilege: Smartphone Client

Enable user
